For someone who made a career out of over-sharing on the Internet, Tyler has a shocking number of personal mishaps and shenanigans to reveal in his first book: experiencing a legitimate rage blackout in a Cheesecake Factory; negotiating a tense standoff with a White House official; crashing a car in front of his entire high school, in an Arby's uniform; projectile vomiting while bartering with a grandmother; and so much more. In *Binge*, Tyler delivers his best untold, hilariously side-splitting moments with the trademark flair that made him a star.

Rising Moon

On Grassy Key, things aren't as idyllic as they seem. The quiet, sleepy community has been awakened. A young woman with strong ties to the community is missing. A local craftsman, the last person to see the girl, is questioned and released. The girl's friends are interviewed. Nobody knows what happened to Cobie, except that she left for work one day and didn't arrive. The only lead is the girl's car, parked where she worked. But it provides no clues and nobody saw anything. Days go by. Then weeks. The case grows cold. The employer of the girl's mother knows Jesse McDermitt, a retired Marine and reputed government spook. Jesse leans on people the way only he can and soon finds there is a lot more to the abduction than anyone knew. Does he find the missing girl? Does he survive what he uncovers? Find out in this 19th novel in Wayne Stinnett's wildly popular Jesse McDermitt Caribbean Adventure Series.

Brain Over Binge

After completely and independently conquering a debilitating eating disorder, Kathryn Hansen wrote *Brain over Binge* to share her struggle-and her escape from it-with those still trapped in the compulsive binge-purge cycle. Since the book's initial release in 2011, it has endured as an essential road map for using the power of the brain to erase harmful habits and create lasting change. The second edition is fully revised and updated with new information, compelling insights, and uplifting success stories that will inspire readers to break free from their own self-defeating behaviors. *Brain over Binge* is both a memoir and a scientific account, providing a gripping personal narrative and a research-based perspective on bulimia and binge eating disorder. Kathryn traces the course of her own condition and then describes in detail her unconventional approach to recovery. In the process, she offers a much-needed alternative viewpoint on the landscape of eating disorder literature to help others in the throes of any form of out-of-control eating. The mainstream view of bulimia holds that it's a complex disorder that manifests as a means of coping with deep underlying emotional and psychological problems. But the author resolutely departs from this philosophy, cuts through the confusion she experienced in traditional therapy, and simplifies both the origins of binge eating and its cure. As Kathryn explains the brain-based principles that led to her recovery from relentless bingeing and purging, *Brain over Binge* sheds current and crucial light on our human potential to overcome destructive patterns and reclaim our lives.

Binge and Bingeability

Binge and Bingeability: The Antecedents and Consequences of Binge Watching Behavior examines how the television industry has transformed over time to create the circumstances in which binge watching as a mass behavior can emerge, and what role audiences have played in the rising prevalence of this behavior. Arienne Ferchaud, recognizing that this behavior did not spring, fully formed, from streaming services, ties cultural approaches to binge watching with media psychology-oriented theories, including the concept of “bingeability”—the likelihood that a specific show will be binge watched—alongside the psychological impacts binge watching may have on viewers over time. Scholars of media studies, television studies, sociology, cultural studies, and psychology will find this book particularly useful.

Binge Times

The first comprehensive account of the biggest wake-up call in the history of the entertainment business: the pivot to streaming. Go inside a disparate group of media and tech companies -- Disney, Apple, AT&T/WarnerMedia, Comcast/NBCUniversal and well-funded startup Quibi – as they scramble to mount multi-billion-dollar challenges to Netflix. After spotting Netflix and the deep-pocketed Amazon Prime Video a decade's head start, rivals from the tech and start-up realm (Apple, Quibi) and traditional media (Disney,

WarnerMedia, NBCUniversal) all decided to move mountains to enter the streaming game. At a cost of billions, each went after their own piece of the market, launching five new services in a seven-month span. And just as the derby was heating up, the coronavirus pandemic arrived, a black-swan event bringing short-term benefits but also stiff challenges. The battle for streaming supremacy may end up having more than one winner, but the cost and disruption to decades-old business models have also produced a lot of losers. Binge Times reveals the true costs of the vision quest as companies are turned inside-out and repeatedly redraw their org charts and strategic plans. Stretching from Silicon Valley to Hollywood to Wall Street, it is a mesmerizing, character-rich tale of hubris and ambition, as the fate of a century-old industry hangs in the balance.

Psychology and Sociology Applied to Medicine

This textbook in the Illustrated Colour Text series offers an integrated treatment of sociology and psychology for medical students. It is presented in a much more colourful and graphic format than is usual for books on these two subjects. This integration reflects the tendency to teach these two subjects together as "behavioural science", with an increased stress on the place of medicine in society, and on illness as a product of psychological and social circumstances rather than merely a biological phenomenon. The book reflects these trends and has been successful and popular with students. An integrated treatment of psychology and sociology for medical students - in line with the trend towards teaching these subjects as "behavioural sciences". Use of case studies and "Stop/Think" boxes encourages critical thinking and discussion. Graphic Illustrated Colour Text presentation style enlivens a subject which most medical students are not keen on. This third edition contains a new introduction on the importance and key features of the biopsychosocial model and additional double-page spreads on International Health and Rural Health.

In this regard eating disorders are regarded as psychiatric conditions though there are some eating disorders that have a genetic basis. Genetic influences will also include polymorphisms. It will provide a framework to unravel the complex links between eating disorders and health-related outcomes and provide practical and useful information for diagnosis and treatment. The volume will also address macronutrients, micronutrients, pharmacology, psychology, genetics, tissue and organ damage, appetite and biochemistry, as well as the effect of eating disorders on family and community. The Encyclopedia of Adolescence breaks new ground as an important central resource for the study of adolescence. Comprehensive in breath and textbook in depth, the Encyclopedia of Adolescence – with entries presented in easy-to-access A to Z format – serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer's print and online flexibility, the Encyclopedia is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to "Self, Identity and Development in Adolescence". This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on "Adolescents' Social and Personal Relationships". This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines "Adolescents in Social Institutions". This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. "Adolescent Mental Health" constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk, victimization, disabilities, flow, and positive youth development.
